Abstract - The objectives of this research was to study the broker types of community network for carbon emission reduction in Khon Kaen city, Thailand. Data were collected via in-depth interviews as well as by participatory and non-participatory observations with 24 key informants who were the community heads and members from 4 communities in KhonKaen city. Data analyses were content analysis with ATLAS. ti program and social network analyzed by UCI-net program. The results of the study indicated that there are three types of broker in theses network; One-broker, Dual-broker, and no broker in full network. The major role of the broker of community network is linked the network together by function of waste management committee.
